

- **Build security to help learn about security policies.**

What You'll Need

- Hands-on Cloud experience with AWS
- An "automate everything" mentality and a healthy dislike of toil.
- General Networking skills and experience in using various scripting tools.
- Passion for working in an agile team, knowledge of Scrum and strong interpersonal communication skills.
- Passion for and experience in automation and CI/CD tooling.
- Hands-on mentality with a demonstrated talent for solving problems proactively.
- A positive and open approach -we want you to have a voice and bring in new ideas and solution.

What's Nice To Have

- Higher educational background.
- Experience in an operational role, whether that be DevOps, SRE or traditional network/server management.
- Software engineering experience.
- Experience using Linux.
- Public Cloud provider certifications.
- Experience with containerization technology (Docker, Kubernetes).
- Experience with at least one functional programming language (e.g. Scala).
- Hands-on Cloud experience with Azure
